DIAGNOSIS AND TREATMENT IN HOLISTIC DENTISTRY

CONCEPT

- HOLISTIC means to observe, evaluate and apply everything that is useful for a complete cure of the patient.
- Holism is not a dogma, not a believe, but to accept the own live.
- The purpose of the good health of the oral cavity is observed following a regenerative concept, minimally invasive, and maximum functional and aesthetic.
- Without cooperation from the patient there will be no durative success.
- The patient must feel in tune with his mouth and his body and the commandments of life.
- In the following there are listed the fields of work of holistic dentistry.
 - I do not describe the conventional field in its content, because it is well known
 - The complementary field instead is appointed more in detail.

VALUATION

- An observation and evaluation of the case with a perspective of necessary treatments, both conventional and complementary with a quote related, is only possible with a visit.
- Quality work takes time, knowledge, skills, engagement and responsibility.
- In Olismo is valid, that real truth exists only by making his own experience perceived with all senses. Working with this truth means to become heal.
- Each case has its own truth and is absolutely individual. So it needs to be treated individually and respectful.
